Tie-aware decile calibration in nested five-fold internal cross-fitting
Stay-equal [L, U] (primary)
Observation-weighted [L, U] (sensitivity)
Nominal tau = 0.10
Population rule
Primary profiled offset
Inner-selected calibrated rule
Calibrated q10
Calibrated last MAP
Calibrated minimum MAP
Calibrated mean MAP
Calibrated MAP <65 burden

Predicted-q decile
Each vertical segment is [L, U], where L=P(Y<q) and U=P(Y<=q); tau inside the segment implies zero interval violation.
